## Abstract

This vignette contains the R-examples of chapter 8 from the book:  
Soetaert, K., Cash, J.R. and Mazzia, F. (2012). Solving Differential Equations in R.  
that will be published by Springer.

Chapter 8. Solving Delay Differential Equations in R.

Here the code is given without documentation. Of course, much more information  
about each problem can be found in the book.

*Keywords:* delay differential equations, initial value problems, examples, R.

## 1. Two simple examples

```
DDE1 <- function(t, y, parms) {  
  tlag <- t - 1  
  if (tlag <= 0)  
    ylag <- 1  
  else  
    ylag <- lagvalue(tlag)  
  
  list(dy = - ylag, ylag = ylag)  
}  
yinit <- 1  
times <- seq(from = 0, to = 10, by = 0.1)  
yout <- dede(y = yinit, times = times, func = DDE1,  
             parms = NULL, atol = 1e-10, rtol = 1e-10 )  
tt <- which(times >= 1 & times <= 2)  
analytic <- c(1-times[times <1] , 0.5*times[tt]^2 - 2*times[tt]+3/2)  
max(abs(yout[times <= 2,2] - analytic))
```

             parms = NULL )
```

## 2. Chaotic Production of White Blood Cells

```
mackey <- function(t, y, parms, tau) {  
  tlag <- t - tau  
  if (tlag <= 0)  
    ylag <- 0.5  
  else  
    ylag <- lagvalue(tlag)
